HOW GREEN PLANTS MAKE FOOD

Class 7 Science | Example notes

1. PHOTOSYNTHESIS

- Green plants make their own food by **photosynthesis**.
- They use **sunlight**, **water** and **carbon dioxide** from the air.
- **Chlorophyll**, the green pigment in leaves, traps the energy of sunlight.
- The food they make is a sugar called **glucose**.
- **Oxygen** is given out into the air.

2. PARTS THAT HELP

- **Roots** take in water from the soil.
- Carbon dioxide enters the leaf through tiny pores called **stomata**.
- **Veins** carry water to the leaves and food to the rest of the plant.
