Sample 08 — Compare and Contrast

GEOGRAPHY • WEATHER AND CLIMATE

WEATHER	CLIMATE
• Short-term conditions • Can change within minutes or hours • Example: rain this afternoon • Measured with daily observations	• Long-term patterns • Describes typical conditions over decades • Example: a region's usual dry season • Studied using long records

Compare

A hot day does not automatically mean a place has a hot climate. To describe climate, scientists need many observations over a long period.

Question: Which word describes conditions measured today? Which word describes a pattern over many years?
