Sample 01 — The Water Cycle

SCIENCE • GRADE 6 • STRUCTURED LESSON

Learning goals

By the end of this lesson, you should be able to name the main stages of the water cycle and explain how the Sun provides energy for the process.

Four main stages

1. Evaporation: Heat from the Sun changes liquid water into water vapour.
2. Condensation: Water vapour cools and forms tiny droplets in clouds.
3. Precipitation: Water falls as rain, snow, sleet, or hail.
4. Collection: Water gathers in rivers, lakes, oceans, and underground.

Remember

Water changes state, but the total amount of water on Earth is continually recycled. This movement is called the **water cycle**.

Quick check

1. What causes evaporation? 2. How do clouds form? 3. Name two forms of precipitation.
